

Melanoma classification (ISIC challenge)

Crowd scores for e.g. asymmetry of lesion can improve classification

Get relative scores for visual features via an app with gamification

@vcheplygina

<http://www.veronikach.com>

Test with volunteers (10
gamification, 10 controls)

Gamification increased
number of annotations

Next: use relative scores
for representation learning

MelaGO!

Can a **gamified**
experience improve
crowdsourcing
for medical
image **annotation?**
